# MVP1 WEB PORTAL FUNCTIONAL SPECIFICATION

Planning, visit management, Level 2 review, Factory 360, Operations Center and cross-module operational web experience.

| Document code        | Version                                 | Date         |
|----------------------|-----------------------------------------|--------------|
| MIM-INSP-MVP1-WEB-FS | 2.0 - MVP1 Final Documentation Contract | 10 July 2026 |

**BINDING DELIVERY RULE**

MVP1 is governed by the complete 9-tab, 478-row customer/auditor spreadsheet baseline. No requirement may be silently removed, weakened, generalized away, replaced by mock behavior, or deferred to MVP2. Strategic BRD content is used only to close implementation-critical gaps and strengthen integrity, auditability, security, offline resilience and operability.

| Primary audience                                                        | Status                                                                     |
|-------------------------------------------------------------------------|----------------------------------------------------------------------------|
| Business, Design, Engineering, QA and Fable/Claude implementation teams | Authoritative implementation input - use with the MVP1 acceptance workbook |

# 1. Purpose, authority and scope boundary

This specification is the independently buildable functional contract for the MVP1 Web Portal. It must be used together with the enhanced MVP1 BRD and the MVP1 Breakdown and Acceptance Contract workbook. The primary functional authority remains all applicable rows from the 478-row Inspection Project.xlsx baseline.

| Code | Module                        | Rows | Mandatory scope                                                                                                                                                      |
|------|-------------------------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| M01  | Visit Planning - Planning     | 52   | Bulk, Single and Immediate visit creation; targeting; assignment; review; publish; immediate start.                                                                  |
| M02  | Visit Planning - Management   | 46   | Workspace, KPIs, search, filters, edit, reassignment, return/republish, cancellation, bulk actions, calendar/map/list, expiry, audit.                                |
| M06  | Level 2 Review & Resubmission | 53   | Review queue, read-only review workspace, approve/return/reject, selective unlock, resubmission, immutable versions, comparison and audit.                           |
| M07  | Factory 360                   | 20   | Unified factory profile covering identity, licenses, CR, map, products, raw materials, workforce, history, violations, actions, health, risk, evidence and timeline. |
| M08  | Operations Center             | 19   | Command dashboard, live map, visit and inspector monitoring, SLA, risk, alerts, exceptions, workload, cancellations, GPS overrides and live tracking history.        |

**No requirement mapped to this channel may be moved to MVP2, reduced to a static mock, or declared complete without runtime and evidence acceptance.**

# 2. Personas, responsibilities and information architecture

| Persona                          | Primary responsibilities                                                                                                               |
|----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| Planner                          | Create Bulk/Single/Immediate plans, select targets, configure visits, assign inspectors, publish and manage change.                    |
| Operations User / Branch Manager | Monitor visits, schedules, exceptions and workload; edit, reschedule, reassign, return, republish or cancel within permission.         |
| Level 2 Reviewer                 | Open immutable submitted versions, inspect evidence and actions, approve/return/reject, target returned sections and compare versions. |
| Operations Center Analyst        | Monitor live map, visit/inspector state, SLA, risk, alerts, cancellations, GPS overrides and tracking history.                         |
| Leadership User                  | Consume trusted KPI, outcome, compliance and operational reporting without bypassing source traceability.                              |

## Mandatory navigation and screen surfaces

| Screen / surface            | Purpose and mandatory behavior                                                                                                   |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| Portal home                 | Role-aware entry into planning, visit management, Factory 360, review and Operations Center.                                     |
| Planning workspace          | Three planning paths with targeting, validation, assignment, review and publish.                                                 |
| Visit management workspace  | KPI, search, filters, details, edit/reschedule, reassignment, return/republish, bulk actions, cancellation, expiry and timeline. |
| Factory 360                 | Unified factory profile with source, history, violations, actions, health/risk and timeline.                                     |
| Review queue and workspace  | Read-only submitted version, section progress, evidence/actions, decision controls, selective return and version comparison.     |
| Operations Center           | Live map/list, workload, SLA, risk, alerts, exceptions, cancellation, GPS override and tracking history.                         |
| Shared search/filter/export | Consistent search, saved views, filtering, pagination/export where required.                                                     |
| Activity timeline           | Chronological audit-visible business events with notes and attachments where permitted.                                          |

# 3. End-to-end web user journeys

## SB04 - Visit Planning - Planning Methods, Targeting and Publishing

Bulk, Single and Immediate planning paths, assignment methods, publication and resulting artifacts.

| Step | Journey slice                  | Business action                                                 | Output                               |
|------|--------------------------------|-----------------------------------------------------------------|--------------------------------------|
| 1    | Choose Planning Path           | Bulk, Single or Immediate.                                      | Planning path                        |
| 2    | Build Criteria / Select Entity | Use AND/OR filters or direct lookup.                            | Candidate factories                  |
| 3    | Preview & Validate Targets     | Check eligibility, duplicates and target count.                 | Validated target set                 |
| 4    | Configure Visit Details        | Set type, scope, location, window and priority.                 | Visit configuration                  |
| 5    | Choose Assignment Method       | Automatic or manual.                                            | Assignment strategy                  |
| 6    | Validate Capacity & Conflicts  | Check availability, skills, workload and conflicts.             | Validated assignment                 |
| 7    | Review Plan Summary            | Confirm factories, visits, resources and schedule.              | Review-ready plan                    |
| 8    | Publish / Dispatch             | Create Visit Plan ID, Visit IDs, assignments and notifications. | Published plan or immediate dispatch |

## SB05 - Visit Planning - Management Workspace and Operational Control

Search, KPI, detail, edit, reassign, return/republish, bulk actions, cancellation, calendar/map/list, expiry.

| Step | Journey slice                  | Business action                                                   | Output                   |
|------|--------------------------------|-------------------------------------------------------------------|--------------------------|
| 1    | Workspace & KPI Summary        | Unified operational view of visits, plan progress and exceptions. | Visit workspace          |
| 2    | Search & Advanced Filters      | Filter by IDs, dates, location, inspector, status and priority.   | Result set / saved view  |
| 3    | Visit Detail                   | Open factory, schedule, route, notes, attachments and history.    | Visit dossier            |
| 4    | Edit & Reschedule              | Change allowed fields with conflict validation.                   | Updated visit            |
| 5    | Reassign Inspectors            | Validate availability/capacity and notify parties.                | Reassignment record      |
| 6    | Return & Republish             | Return for updates, edit, validate and republish.                 | Republished visit        |
| 7    | Bulk Actions                   | Select many visits and perform governed bulk changes.             | Bulk audit record        |
| 8    | Cancellation                   | Cancel with reason, date, notifications and history.              | Cancellation record      |
| 9    | Calendar / Map / List          | Switch synchronized operational views.                            | Operational views        |
| 10   | Timeline / Notes / Attachments | Maintain complete activity record.                                | Timeline and attachments |
| 11   | Automatic Expiry               | System applies configured expiry semantics and logs event.        | Expiry event             |

## SB10 - Level 2 Review, Return and Version Control - Decision Workflow

Review queue, read-only review, decisions, returned-section unlock, resubmission, version comparison and immutable audit.

| Step | Journey slice                 | Business action                                                | Output                    |
|------|-------------------------------|----------------------------------------------------------------|---------------------------|
| 1    | Pending Review Queue          | Open submitted inspections by priority/date/factory/inspector. | Review queue              |
| 2    | Search / Filter / Open        | Find and open exact submission version.                        | Selected version          |
| 3    | Review Workspace              | Track sections, completeness and open issues.                  | Review context            |
| 4    | Factory Observations          | Validate factory data and observations.                        | Reviewed observations     |
| 5    | Report & Checklist            | Review responses, scores and compliance outcome.               | Reviewed checklist        |
| 6    | Evidence & Action Forms       | Inspect evidence, actions and open items.                      | Reviewed evidence/actions |
| 7    | Approve / Return / Reject     | Make governed decision with mandatory comments/reason.         | Decision record           |
| 8    | Returned Summary              | Communicate reason, affected sections, blockers and due date.  | Return package            |
| 9    | Unlock Returned Sections Only | Only specified sections become editable.                       | Selective edit scope      |

| Step | Journey slice              | Business action                                   | Output         |
|------|----------------------------|---------------------------------------------------|----------------|
| 10   | Resubmission & New Version | Create new immutable submitted version.           | New version    |
| 11   | Version Comparison         | Show exactly what changed.                        | Diff view      |
| 12   | Immutable Audit & Timeline | Preserve all submissions, decisions and comments. | Audit timeline |

## SB11 - Factory 360 - Comprehensive Profile, History and Compliance View

Identity, licence, CR, location, products, raw materials, workforce, inspection history, violations, actions, scores, risk and timeline.

| Step | Journey slice                     | Business action                                               | Output                 |
|------|-----------------------------------|---------------------------------------------------------------|------------------------|
| 1    | Identity & Registration           | Factory identity, CR, licence, branch and authority data.     | Factory master profile |
| 2    | Location & Map                    | Official and field-verified location, map and contact points. | Location dossier       |
| 3    | Products & Raw Materials          | Configured products, materials and industrial context.        | Operational profile    |
| 4    | Workforce / Investment / Capacity | Key factory scale and operating metrics.                      | Capacity snapshot      |
| 5    | Visit & Inspection History        | Chronological visits, inspection types, reports and outcomes. | Inspection history     |
| 6    | Violations & Penalties            | All enforcement history linked to source inspections.         | Enforcement history    |
| 7    | Corrective & Action Items         | Open/closed actions, owners, due dates and evidence.          | Action history         |
| 8    | Health & Risk                     | Current health/risk indicators and drivers.                   | Risk/health snapshot   |
| 9    | Documents & Evidence              | Source documents and linked evidence with provenance.         | Evidence dossier       |
| 10   | Unified Timeline & Access         | Role-controlled longitudinal history across all events.       | Factory 360 timeline   |

## SB12 - Operations Center - Command Dashboard, Live Map and Monitoring

Live operations map, visit/inspector states, SLA, risk, alerts, workload, cancellations, GPS overrides and tracking history.

| Step | Journey slice                | Business action                                                           | Output               |
|------|------------------------------|---------------------------------------------------------------------------|----------------------|
| 1    | Command Dashboard            | National/operational summary of visits, execution and exceptions.         | Command KPIs         |
| 2    | Live Map                     | Synchronized map and list of inspectors, visits and sites.                | Live operational map |
| 3    | Visit Monitoring             | Track planned, en route, checked-in, executing, review and closed states. | Visit state feed     |
| 4    | Inspector Monitoring         | Workload, availability and active journey/execution context.              | Inspector state      |
| 5    | SLA Monitoring               | Due, at-risk, overdue and breached work.                                  | SLA status           |
| 6    | Risk Monitoring              | High-risk factories/visits and drivers.                                   | Risk alerts          |
| 7    | Alerts & Exceptions          | Operational exceptions, blockers and escalations.                         | Exception queue      |
| 8    | Cancellation & GPS Overrides | Dedicated monitoring with reasons and approval trail.                     | Exception records    |
| 9    | Tracking History             | Review journey/location history subject to policy.                        | Tracking history     |
| 10   | Fault Isolation & Export     | One widget failure cannot break command center; export governed data.     | Resilient dashboard  |

## SB17 - Returned Inspection Correction, Resubmission and Version Comparison

Returned section targeting, selective unlock, immutable reviewer comments, new versions and before/after comparison.

| Step | Journey slice              | Business action                                               | Output                |
|------|----------------------------|---------------------------------------------------------------|-----------------------|
| 1    | Receive Return Decision    | Inspector receives immutable reviewer comments and reason.    | Return notice         |
| 2    | Identify Affected Sections | Show only sections/items targeted for correction.             | Return scope          |
| 3    | Lock Unaffected Content    | All other submitted content remains read-only.                | Locked baseline       |
| 4    | Edit Returned Sections     | Inspector corrects only allowed scope.                        | Corrected draft       |
| 5    | Add New Evidence / Forms   | Add new artifacts without rewriting original history.         | Correction evidence   |
| 6    | Validate Corrections       | Re-run mandatory rules on returned scope.                     | Correction validation |
| 7    | Create New Version         | Resubmission creates immutable new version.                   | Version N+1           |
| 8    | Compare Versions           | Highlight changes by section/item/evidence.                   | Version diff          |
| 9    | Reopen Review              | Reviewer evaluates latest version with prior history visible. | Re-review state       |
| 10   | Preserve Timeline          | All versions, comments and decisions remain immutable.        | Audit timeline        |

## SB19 - MVP1 Web Portal and Inspector Workspace Information Architecture

Navigation structure connecting planning, management, Factory 360, Operations Center, review, pre-start and execution.

| Step | Journey slice                     | Business action                                                  | Output                 |
|------|-----------------------------------|------------------------------------------------------------------|------------------------|
| 1    | Web Portal Home                   | Access planning, management, Factory 360, review and operations. | Web navigation         |
| 2    | Planning Workspace                | Bulk/Single/Immediate planning.                                  | Visit plans            |
| 3    | Visit Management                  | Operational control and bulk actions.                            | Managed visits         |
| 4    | Factory 360                       | Unified factory dossier.                                         | Factory context        |
| 5    | Review Workspace                  | Level 2 queue, decisions and version comparison.                 | Review decisions       |
| 6    | Operations Center                 | Live map, SLA, risk and exceptions.                              | Operational visibility |
| 7    | Inspector Home                    | Assigned visits and readiness.                                   | Inspector assignments  |
| 8    | Journey & Check-in                | Travel, telemetry, arrival and geofence.                         | Journey records        |
| 9    | Inspection Workspace              | Report, checklist, evidence and actions.                         | Inspection content     |
| 10   | Submission & Correction           | Submit, receive returns, correct and resubmit.                   | Versioned submissions  |
| 11   | Shared Search / Alerts / Timeline | Consistent cross-module access patterns.                         | Shared UX              |
| 12   | Cross-Channel Deep Links          | Preserve object, version and context across channels.            | Context continuity     |

## 4. Web functional rules, states and acceptance

| Domain           | Object             | From                    | Trigger           | To           | Guard                                                                               | Regression rule                                                 |
|------------------|--------------------|-------------------------|-------------------|--------------|-------------------------------------------------------------------------------------|-----------------------------------------------------------------|
| Visit Planning   | Visit Plan         | Draft                   | Publish           | Published    | All mandatory plan fields valid; selected targets valid; assignment rules satisfied | No direct database status mutation may bypass transition guards |
| Visit Management | Visit / Visit Plan | Published               | Return for update | Returned     | Mandatory return reason                                                             | Returned state cannot silently erase published history          |
| Visit Management | Visit              | Published/Returned      | Cancel            | Cancelled    | Mandatory cancellation reason and scope                                             | No hard delete in place of cancellation                         |
| Visit Management | Visit              | Applicable active state | Expiry rule fires | Expired      | Configured expiry threshold reached and no exception applies                        | Expired must be system-governed, not only a label               |
| Review           | Inspection Version | Submitted               | Open Review       | Under Review | Reviewer permission                                                                 | Submitted content remains read-only                             |

| Domain     | Object              | From         | Trigger  | To                       | Guard                                                         | Regression rule                                    |
|------------|---------------------|--------------|----------|--------------------------|---------------------------------------------------------------|----------------------------------------------------|
| Review     | Inspection Version  | Under Review | Return   | Returned                 | Mandatory reason; affected sections identified                | Selective unlock is mandatory                      |
| Review     | Inspection Version  | Under Review | Approve  | Approved                 | Review completeness and decision rules satisfied              | Approved decision cannot be silently edited        |
| Review     | Inspection Version  | Under Review | Reject   | Rejected                 | Mandatory rejection explanation                               | Rejected history must remain visible               |
| Correction | Returned Inspection | Returned     | Resubmit | Submitted / Under Review | Only returned sections edited; mandatory corrections complete | Every resubmission creates a new immutable version |

## 5. Engine and service dependencies

| ID     | Engine                                       | Consumers                                                  | Mandatory behavior                                                                                                                                       | Acceptance proof                                                                                  | Forbidden shortcut                                   |
|--------|----------------------------------------------|------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|------------------------------------------------------|
| ENG-03 | Workflow Engine                              | All channels                                               | States, transitions, allowed actors, guards, required fields, side effects, notifications, SLA and escalation.                                           | Demonstrate configurable transition and prove runtime follows it                                  | Hard-coded status chips called a workflow engine     |
| ENG-04 | Risk Engine                                  | Planning, Factory 360, Operations, Review where applicable | Risk variables, weights/thresholds, source provenance, score calculation, version reference and explainability sufficient for MVP1 targeting/visibility. | Recalculate a factory score from stored inputs and version; show planning/Factory 360 consumption | Decorative risk gauge with no reproducible logic     |
| ENG-05 | Assignment Engine                            | Planning, Management, Inspector Workspace                  | Automatic and manual assignment; availability/capacity checks; conflict detection; override traceability.                                                | Publish visits with valid assignments and prove conflict handling                                 | Random assignment or manual dropdown only            |
| ENG-06 | GIS, Geofence & Journey Telemetry            | Planning, iPad, Operations Center                          | Official/observed location, geofence, GPS accuracy, journey state, ETA/distance, route deviation, arrival radius, check-in, override and audit.          | Complete journey from start to geofence and show synchronized Ops Center evidence                 | Map widget without governed location events          |
| ENG-09 | Review, Return & Version Engine              | Review, iPad, Web                                          | Read-only submitted versions; approve/return/reject; immutable reviewer comments; selective unlock; new resubmission version; comparison.                | Return two sections, prove all others remain locked, resubmit and compare versions                | Editing original submitted version in place          |
| ENG-11 | Notification, SLA & Escalation Engine        | All channels                                               | Events, recipients, templates, reminders, SLA timers, overdue rules and escalations required by MVP1.                                                    | Demonstrate assignment, return, cancellation, expiry, appointment and overdue notifications       | Hard-coded toasts with no event/recipient governance |
| ENG-12 | Audit, Version & Non-Regression Traceability | All channels                                               | Immutable event history, source requirement IDs, configuration versions, actor/time, before/after state, evidence links and acceptance proof.            | Trace a source row from spreadsheet to implementation, runtime event, test and evidence           | Marking complete without reproducible evidence       |

## 6. Cross-cutting controls and non-functional requirements

- Role-based access and least privilege apply to every screen, action and data scope.
- Every state-changing action must be auditable with actor, time, object, before/after state and version references where relevant.
- No submitted inspection, published configuration, reviewer decision or immutable audit record may be edited silently in place.
- Validation errors must preserve user work and identify exact blockers; partial state transitions are prohibited.
- All retryable operations must be idempotent so retries cannot create duplicate visits, evidence, notifications or submissions.
- The UI must use high-contrast, readable typography, strong hierarchy and consistent canonical components across all modules.
- Accessibility, localization readiness and responsive/device-specific behavior must be designed as system qualities rather than late-stage patches.
- Accepted behavior becomes part of the protected regression baseline.

## 7. UI/UX implementation authority for the Web Portal

- Use dense enterprise workspaces, not generic dashboard cards. Tables, filters, bulk actions, split views, map/list synchronization, timelines and evidence/version comparison are first-class patterns.
- Planning must make the three methods visually distinct while sharing canonical visit fields and publish validation.
- Level 2 review must keep submitted content read-only and make return scope, version history and decision consequences unmistakable.
- Factory 360 must behave as an entity dossier with longitudinal context, not a marketing-style profile page.
- Operations Center must preserve usability when one widget/service fails and must clearly distinguish live, stale, delayed and unavailable data.

## 8. Complete channel requirement catalogue

This appendix preserves all 190 spreadsheet requirement rows mapped to this functional specification. The acceptance workbook remains the machine-readable execution contract.

| Requirement  | Capability                     | User action                                                                                   | System reaction                                                                                                                            | Business rule                                                                                                             | Acceptance                                                                                        |
|--------------|--------------------------------|-----------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|
| MVP1-M01-001 | Visit Creation                 | Select planning method.                                                                       | Load the selected planning workflow.                                                                                                       | Three planning methods are supported: Bulk, Single and Immediate.                                                         | User can access only the planning methods permitted by their role.                                |
| MVP1-M01-002 | Bulk Planning                  | Build search criteria, search factories, select/unselect factories, configure visit, publish. | Retrieve factories, validate duplicates, generate Visit Plan, generate Visit IDs, assign inspectors, notify inspectors, create audit logs. | One Visit Plan can generate multiple Visits. Every Visit receives a unique Visit ID while sharing the same Visit Plan ID. | Planner successfully publishes a Visit Plan and all selected factories receive individual Visits. |
| MVP1-M01-003 | Planning Criteria Builder      | Add, edit and remove criteria using AND / OR conditions.                                      | Validate criteria and execute factory search.                                                                                              | Multiple filters can be combined. Both AND and OR conditions are supported.                                               | Planner can build one or multiple search criteria without limitation.                             |
| MVP1-M01-004 | Target Factory Identification  | Review search results.                                                                        | Retrieve all matching factories.                                                                                                           | Only factories matching all criteria are returned.                                                                        | Matching factories are successfully retrieved.                                                    |
| MVP1-M01-005 | Target Factory Selection       | Select or remove factories individually or in bulk.                                           | Track selected factories and prepare Visit Plan.                                                                                           | Planner has full control over the selected factories before publishing.                                                   | Only selected factories proceed to Visit Configuration.                                           |
| MVP1-M01-006 | Visit Configuration            | Select Business Visit Type, Visit Window, Assignment Method, Notes.                           | Validate mandatory fields.                                                                                                                 | Configuration applies to every Visit generated from the same Visit Plan.                                                  | Planner successfully configures the Visit Plan.                                                   |
| MVP1-M01-007 | Automatic Inspector Assignment | Select Auto Assignment.                                                                       | Assign inspectors according to assignment strategy.                                                                                        | Assignment occurs before publishing.                                                                                      | Every Visit has an assigned inspector before publishing.                                          |
| MVP1-M01-008 | Manual Inspector Assignment    | Select inspector for one or multiple visits.                                                  | Validate inspector availability.                                                                                                           | Planner may override automatic recommendations.                                                                           | Planner successfully assigns inspectors manually.                                                 |
| MVP1-M01-009 | Review Visit Plan              | Review all configuration and assignments.                                                     | Validate all required information.                                                                                                         | Publishing is blocked until all mandatory information is completed.                                                       | Planner reviews the complete Visit Plan before publishing.                                        |
| MVP1-M01-010 | Publish Visit Plan             | Confirm publishing.                                                                           | Create Visit Plan, create individual Visits, assign inspectors, update inspector calendars, generate audit records, send notifications.    | Every generated Visit becomes an independent business object while remaining linked to the originating Visit Plan.        | Individual Visits are successfully generated, assigned and available to inspectors.               |
| MVP1-M01-011 | Select Planning Method         | Select Bulk, Single or Immediate.                                                             | Load corresponding planning workflow.                                                                                                      | Only one planning method can be selected per creation session.                                                            | Selected planning workflow opens successfully.                                                    |
| MVP1-M01-012 | Build Planning Criteria        | Add/remove filters, combine using AND/OR.                                                     | Validate criteria.                                                                                                                         | Unlimited filter combinations supported.                                                                                  | Planner can create valid search criteria.                                                         |
| MVP1-M01-013 | Retrieve Target Factories      | Click Search.                                                                                 | Execute search and return matching factories.                                                                                              | Only matching factories are returned.                                                                                     | Matching factories displayed.                                                                     |
| MVP1-M01-014 | Review Target Factories        | Sort, filter, open factory profile.                                                           | Display factory information.                                                                                                               | Factories are read-only during review.                                                                                    | Planner can review every returned factory.                                                        |

| MVP1-M01-028 | Automatic Inspector Assignment | Select Auto Assignment.                                                   | Assign inspectors according to configured strategy.                                                                                                                            | Every generated visit must have one assigned inspector before publishing.                                                                           | All visits receive inspector assignments automatically.                                                           |
| MVP1-M01-029 | Manual Inspector Assignment    | Select inspector for one or multiple visits.                              | Validate inspector eligibility and assignment conflicts.                                                                                                                       | Manual assignment overrides automatic assignment.                                                                                                   | Planner successfully assigns inspectors manually.                                                                 |
| MVP1-M01-030 | Review Visit Plan              | Review selected factories, assignments and visit configuration.           | Validate mandatory data, detect duplicate visits and highlight validation errors.                                                                                              | Publishing is blocked until all mandatory validations pass.                                                                                         | Planner successfully reviews the Visit Plan before publishing.                                                    |
| MVP1-M01-031 | Publish Visit Plan             | Confirm publishing.                                                       | Create Visit Plan, generate individual Visit IDs, assign inspectors, update inspector calendars, send notifications, create audit records and move visits to Published status. | Every Visit receives a unique Visit ID. All Visits inherit the same Visit Plan ID. Inspectors receive only individual Visits, never the Visit Plan. | Visit Plan is published successfully. Individual visits are created, assigned, audited and visible to inspectors. |
| MVP1-M01-032 | Bulk Edit Visit Plan           | Modify one or more fields and save changes.                               | Apply updates to all selected child visits and record audit logs.                                                                                                              | Bulk Edit is allowed only before any selected visit has started inspection. All editable fields are supported.                                      | All selected visits are updated successfully.                                                                     |
| MVP1-M01-033 | Bulk Cancel Visits             | Select visits and provide cancellation reason.                            | Cancel selected visits, notify inspectors and record audit logs.                                                                                                               | Only visits that have not started inspection can be cancelled.                                                                                      | Selected visits are successfully cancelled and inspectors are notified.                                           |
| MVP1-M01-034 | Select Single Planning         | Select Single Planning.                                                   | Load the Single Planning workspace.                                                                                                                                            | Only one factory can be planned within a Single Visit Plan.                                                                                         | Single Planning workspace opens successfully.                                                                     |
| MVP1-M01-035 | Search Factory                 | Search using CR Number or Industrial License Number.                      | Validate search input and retrieve matching records.                                                                                                                           | Search supports CR and Industrial License only.                                                                                                     | Matching factory information is successfully retrieved.                                                           |

| Requirement  | Capability                 | User action                                                                                                         | System reaction                                                                                                     | Business rule                                                                                                                                                    | Acceptance                                                                       |
|--------------|----------------------------|---------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------|
| MVP1-M01-036 | Select Industrial License  | Select one Industrial License.                                                                                      | Retrieve selected license details.                                                                                  | If multiple licenses exist, one license must be selected before proceeding.                                                                                      | Planner successfully selects the intended Industrial License.                    |
| MVP1-M01-037 | Retrieve Factory Profile   | Review retrieved information.                                                                                       | Display factory information including CR, Industrial License, Factory Name, Region, City, License Stage and Status. | Factory information is read-only except location.                                                                                                                | Factory profile is displayed successfully.                                       |
| MVP1-M01-038 | Verify Factory Location    | Confirm location, modify map pin or manually pin a new location.                                                    | Display existing location and save updates if modified.                                                             | Planner may override the stored location before publishing. System should distinguish between the official registered location and the planner-updated location. | Verified location is successfully saved.                                         |
| MVP1-M01-039 | Configure Visit Details    | Select Business Visit Type, Visit Window, Assignment Method and Notes.                                              | Validate mandatory fields.                                                                                          | Configuration applies only to the selected visit.                                                                                                                | Planner completes all required fields successfully.                              |
| MVP1-M01-040 | Assign Inspector           | Select Auto Assignment or Manual Assignment.                                                                        | Assign inspector and validate availability.                                                                         | Every visit must have one assigned inspector before publishing.                                                                                                  | Visit is successfully assigned.                                                  |
| MVP1-M01-041 | Review Single Visit        | Review factory information, assignment and visit configuration.                                                     | Validate duplicate visits, mandatory fields and planning rules.                                                     | Publishing is blocked until validation passes.                                                                                                                   | Planner successfully reviews the visit.                                          |
| MVP1-M01-042 | Publish Single Visit       | Confirm publishing.                                                                                                 | Generate Visit ID, assign inspector, update calendar, notify inspector and record audit logs.                       | A Single Visit creates one Visit Plan containing one Visit. The inspector receives only the Visit.                                                               | Visit is successfully published and available in the inspector's work queue.     |
| MVP1-M01-043 | Select Immediate Visit     | Select Immediate Visit.                                                                                             | Load Immediate Visit workspace.                                                                                     | Immediate Visits bypass Visit Plans and create a Visit directly.                                                                                                 | Immediate Visit workspace opens successfully.                                    |
| MVP1-M01-044 | Search Existing Factory    | Search using CR Number or Industrial License Number.                                                                | Retrieve factory information if available.                                                                          | Factory search is optional. Immediate Visits can continue even when no record is found.                                                                          | Factory information is successfully retrieved when available.                    |
| MVP1-M01-045 | Manual Factory Information | Enter factory name (optional), CR (optional), Industrial License (optional) and any available business information. | Store manually entered information with the visit.                                                                  | Immediate Visits do not require a registered factory.                                                                                                            | User can continue without a CR or Industrial License.                            |
| MVP1-M01-046 | Capture Visit Location     | Confirm existing location, modify map pin or manually pin a new location.                                           | Save the selected location with the visit.                                                                          | Location is mandatory before the visit can be created. If no registered location exists, planner or inspector must manually identify it.                         | Visit location is successfully captured.                                         |
| MVP1-M01-047 | Configure Immediate Visit  | Select Business Visit Type, Visit Window (Planner only), Notes and Priority (Optional).                             | Validate mandatory information.                                                                                     | Planner may schedule an Immediate Visit. Inspector-created Immediate Visits start immediately.                                                                   | Required information is successfully captured.                                   |
| MVP1-M01-048 | Assign Inspector           | Select Auto or Manual Assignment.                                                                                   | Assign inspector and validate assignment.                                                                           | Only Planner-created Immediate Visits require assignment.                                                                                                        | Assigned inspector is successfully linked to the visit.                          |
| MVP1-M01-049 | Review Immediate Visit     | Review factory information, location and visit configuration.                                                       | Validate mandatory information and duplicate active visits.                                                         | Review step is required only for Planner-created Immediate Visits.                                                                                               | Planner successfully reviews the Immediate Visit before creation.                |
| MVP1-M01-050 | Create Immediate Visit     | Confirm creation.                                                                                                   | Generate Visit ID, create audit record and register the visit.                                                      | Immediate Visits generate a Visit directly without creating a Visit Plan.                                                                                        | Immediate Visit is successfully created.                                         |
| MVP1-M01-051 | Start Immediate Inspection | Click Start Inspection.                                                                                             | Change Visit Status to Inspection Started and transfer ownership to Visit Execution.                                | Available only for Inspector-created Immediate Visits. Once inspection starts, the visit follows the standard execution lifecycle.                               | Inspection starts successfully and the visit appears in the execution workspace. |
| MVP1-M01-052 | Notify Assigned Inspector  | N/A                                                                                                                 | Send notification and update inspector calendar/work queue.                                                         | Notifications are generated only when the visit is assigned to another inspector.                                                                                | Assigned inspector receives the Immediate Visit in their work queue.             |
| MVP1-M02-001 | Visit Management Workspace | Open Visit Management.                                                                                              | Load KPIs, search, filters and visit list.                                                                          | Only visits within the planning lifecycle are displayed.                                                                                                         | Planner can access all planned visits.                                           |

| Requirement  | Capability                 | User action                                                                                 | System reaction                                                                                                         | Business rule                                                                                                                                                               | Acceptance                                                                 |
|--------------|----------------------------|---------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------|
| MVP1-M02-002 | Visit KPIs                 | Select KPI.                                                                                 | Display Draft, Published, Returned, Cancelled and Expired counts. Selecting a KPI filters the visit list automatically. | KPIs represent only planning statuses. Inspection execution statuses are excluded.                                                                                          | KPI values match the underlying visit records.                             |
| MVP1-M02-003 | Search Visits              | Search by Visit ID, Factory Name, CR Number, Industrial License or Inspector.               | Retrieve matching visits.                                                                                               | Partial matching is supported.                                                                                                                                              | Matching visits are displayed.                                             |
| MVP1-M02-004 | Filter Visits              | Apply one or more filters.                                                                  | Refresh visit list.                                                                                                     | Multiple filters may be combined.                                                                                                                                           | Visit list reflects selected filters.                                      |
| MVP1-M02-005 | View Visit Details         | View details.                                                                               | Display factory profile, location, assignment, visit information, timeline and audit history.                           | Information is read-only until Edit is selected.                                                                                                                            | Planner can access complete visit information.                             |
| MVP1-M02-006 | Edit Visit                 | Update Business Visit Type, Visit Window, Inspector, Factory Location and Notes.            | Validate changes, save updates and record audit logs.                                                                   | Edit is allowed only before the inspection has started.                                                                                                                     | Changes are successfully saved and audited.                                |
| MVP1-M02-007 | Bulk Edit Visits           | Select child visits and update shared fields.                                               | Apply updates to all selected visits and record audit logs.                                                             | Bulk Edit is only available for visits within the same Visit Plan and before inspection starts.                                                                             | Selected visits are successfully updated.                                  |
| MVP1-M02-008 | Return Visit Handling      | Review return reason, edit visit, republish or cancel.                                      | Display return reason and maintain audit history.                                                                       | Returned visits are always managed as Single Visits, even if originally created through Bulk Planning.                                                                      | Planner can successfully process returned visits.                          |
| MVP1-M02-009 | Republish Returned Visit   | Confirm republishing.                                                                       | Change status to Published, notify assigned inspector and update audit history.                                         | Same Visit ID and same Visit Plan ID are retained.                                                                                                                          | Returned visit is successfully republished.                                |
| MVP1-M02-010 | Cancel Visit               | Enter cancellation reason and confirm.                                                      | Update status, notify inspector and record audit log.                                                                   | Cancellation is only allowed before inspection starts. Cancelled is a final state.                                                                                          | Visit is cancelled successfully and removed from active planning.          |
| MVP1-M02-011 | Bulk Cancel Visits         | Select visits, enter cancellation reason and confirm.                                       | Cancel selected visits, notify inspectors and record audit logs.                                                        | Only visits that have not started inspection may be cancelled.                                                                                                              | Selected visits are successfully cancelled.                                |
| MVP1-M02-012 | Duplicate Visit Validation | N/A                                                                                         | Detect active or overlapping visits for the same factory.                                                               | Duplicate active visits are not allowed.                                                                                                                                    | Duplicate visits are successfully prevented.                               |
| MVP1-M02-013 | Activity Timeline          | Review timeline.                                                                            | Display all visit events in chronological order.                                                                        | Timeline cannot be modified by users.                                                                                                                                       | Timeline displays complete visit history.                                  |
| MVP1-M02-014 | Audit Trail                | Review audit records.                                                                       | Record every change with previous value, new value, user and timestamp.                                                 | All planning actions must be audited. Audit records cannot be edited or deleted.                                                                                            | Every planning action is traceable.                                        |
| MVP1-M02-015 | Visit Status Management    | N/A                                                                                         | Enforce lifecycle transitions based on business rules.                                                                  | Valid planning statuses are Draft, Published, Returned, Cancelled and Expired. Cancelled and Expired are final states. Returned is only available before inspection starts. | Invalid status transitions are prevented automatically.                    |
| MVP1-M02-016 | Expired Visit Management   | N/A                                                                                         | Update visit status to Expired and record audit history.                                                                | Expired is a final state. No edit, republish or cancel actions are allowed. View only.                                                                                      | Visits automatically expire after the configured visit window ends.        |
| MVP1-M02-017 | Visit Plan Details         | View child visits, assignments and planning summary.                                        | Display all visits belonging to the selected Visit Plan.                                                                | Bulk operations are only available from the Visit Plan level.                                                                                                               | Planner can successfully manage all visits within the selected Visit Plan. |
| MVP1-M02-018 | Assignment Overview        | View inspector workload and assigned visits.                                                | Display inspector capacity, assigned visits and available workload.                                                     | Read-only dashboard used to support planning decisions.                                                                                                                     | Planner can review inspector workload before reassigning visits.           |
| MVP1-M02-019 | Visit Management Workspace | Open workspace.                                                                             | Load KPIs, filters, search, visit list and planner actions.                                                             | None                                                                                                                                                                        | Visit Repository, User Roles, Dashboard Service                            |
| MVP1-M02-020 | Planning KPI Summary       | View KPIs and drill into records.                                                           | Calculate and display planning KPIs.                                                                                    | None                                                                                                                                                                        | Visit Repository                                                           |
| MVP1-M02-021 | Advanced Search            | Search by Visit ID, Visit Plan ID, CR, License Number, Factory Name, Inspector or Campaign. | Retrieve matching records.                                                                                              | None                                                                                                                                                                        | Search Engine, Visit Repository                                            |

| Requirement  | Capability                 | User action                                            | System reaction                                                                                            | Business rule                                | Acceptance                              |
|--------------|----------------------------|--------------------------------------------------------|------------------------------------------------------------------------------------------------------------|----------------------------------------------|-----------------------------------------|
| MVP1-M02-022 | Advanced Filters           | Apply one or more filters.                             | Refresh visit list.                                                                                        | None                                         | Visit Repository                        |
| MVP1-M02-023 | Visit List                 | Sort, group, select and open visits.                   | Display configurable visit grid.                                                                           | None                                         | Visit Repository                        |
| MVP1-M02-024 | View Visit Details         | View visit information.                                | Display factory profile, assignment, planning information, location, timeline, attachments and audit.      | None                                         | Visit Repository                        |
| MVP1-M02-025 | Edit Visit                 | Update editable fields.                                | Validate, save changes and audit updates.                                                                  | Status unchanged                             | Validation Engine, Assignment Engine    |
| MVP1-M02-026 | Reassign Inspector         | Select another inspector.                              | Validate eligibility, workload and update assignment. Notify affected inspector(s).                        | Status unchanged                             | Assignment Engine, Notification Service |
| MVP1-M02-027 | Reschedule Visit           | Select new visit window.                               | Validate planning conflicts and update schedule.                                                           | Status unchanged                             | Calendar Engine                         |
| MVP1-M02-028 | Cancel Visit               | Enter cancellation reason and confirm.                 | Cancel visit, notify inspector and audit the action.                                                       | Published/Returned → Cancelled               | Notification Service, Audit Service     |
| MVP1-M02-029 | Process Returned Visit     | Review return reason, update planning information.     | Display return reason and allow corrections.                                                               | Returned remains Returned until republished. | Visit Repository                        |
| MVP1-M02-030 | Republish Visit            | Confirm republishing.                                  | Validate updates, notify inspector and audit changes.                                                      | Returned → Published                         | Notification Service                    |
| MVP1-M02-031 | Bulk Edit Visits           | Update shared information.                             | Apply changes across selected visits.                                                                      | Status unchanged                             | Visit Plan Repository                   |
| MVP1-M02-032 | Bulk Reassign              | Select inspector(s).                                   | Update assignments and notify inspectors.                                                                  | Status unchanged                             | Assignment Engine                       |
| MVP1-M02-033 | Bulk Reschedule            | Select new visit window.                               | Validate schedule conflicts and update visits.                                                             | Status unchanged                             | Calendar Engine                         |
| MVP1-M02-034 | Bulk Cancel                | Select visits and confirm cancellation.                | Cancel selected visits and notify inspectors.                                                              | Published/Returned → Cancelled               | Notification Service                    |
| MVP1-M02-035 | Visit Plan Details         | View summary and child visits.                         | Display campaign information, progress and statistics.                                                     | None                                         | Visit Plan Repository                   |

|--------------|------------------------------|------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------|
| MVP1-M06-001 | Review Decision Panel        | Select Approve, Return, or Reject.                                                             | Display available actions based on reviewer permission and inspection status.                                                                                     | Only Level 2 reviewer can approve, return, or reject. Reviewer cannot edit inspection content.           | Reviewer sees only valid actions for Pending Review inspection.            |
| MVP1-M06-002 | Approve Confirmation         | Click Approve, review confirmation summary, confirm approval or cancel.                        | Display inspection summary, violations, critical violations, action forms, evidence count, factory updates, version number, and compliance preview.               | Approval is irreversible. Reviewer must confirm before approval is committed.                            | Approval confirmation appears before final approval.                       |
| MVP1-M06-003 | Compliance Preview           | Review preview only.                                                                           | Display expected penalties, official documents, corrective actions, and notifications that may be generated after approval.                                       | Preview is read-only. Reviewer cannot modify penalties from this screen.                                 | Reviewer can see consequences before approving.                            |
| MVP1-M06-004 | Approve Inspection           | Click Confirm Approve.                                                                         | Permanently lock latest inspection version, update status to Approved, create approval timeline event, notify inspector, trigger Compliance Management.           | Approved inspection is permanently read-only. Compliance Engine starts only after approval.              | Inspection status becomes Approved and Compliance Management is triggered. |
| MVP1-M06-005 | Return Confirmation          | Select returned sections, enter mandatory reason, optional comments, confirm return or cancel. | Display selected returned sections, reason field, comments field, and return impact summary.                                                                      | Return reason is mandatory. Reviewer may identify one or more sections requiring correction.             | Return cannot be submitted without reason.                                 |
| MVP1-M06-006 | Return Inspection            | Confirm return.                                                                                | Update status to Returned, unlock returned inspection for assigned inspector, preserve submitted version, notify inspector, create timeline and audit events.     | Returned inspection becomes editable for inspector. Previous submitted version remains locked for audit. | Inspection is returned and inspector can update it.                        |
| MVP1-M06-007 | Reject Confirmation          | Enter mandatory rejection reason, optional comments, confirm reject or cancel.                 | Display rejection impact: status becomes Rejected, no Compliance Management, inspection read-only forever, inspector notified.                                    | Rejection reason is mandatory. Reject is final.                                                          | Reject cannot proceed without reason.                                      |
| MVP1-M06-008 | Reject Inspection            | Confirm reject.                                                                                | Update status to Rejected, permanently lock inspection, stop workflow, prevent Compliance Management trigger, notify inspector, create timeline and audit events. | Rejected inspections cannot be reopened. If another inspection is required, a new visit must be created. | Inspection is rejected, read-only, and Compliance Engine is not triggered. |
| MVP1-M06-009 | Decision Audit               | None.                                                                                          | Log reviewer ID, decision, reason, comments, previous status, new status, timestamp, version, and affected sections.                                              | Every decision must be immutable and auditable.                                                          | Complete audit record exists for each decision.                            |
| MVP1-M06-010 | Decision Timeline            | View timeline.                                                                                 | Add timeline event for Approved, Returned, or Rejected decision.                                                                                                  | Timeline is immutable.                                                                                   | Decision appears in inspection timeline.                                   |
| MVP1-M06-011 | Version Handling on Return   | Inspector edits returned inspection and resubmits.                                             | Preserve previous submitted version and create a new version on resubmission.                                                                                     | No submitted version is overwritten. Latest submitted version is used for review.                        | Reviewer can compare previous and latest versions.                         |
| MVP1-M06-012 | Reviewer Read-Only Rule      | Review only.                                                                                   | Disable editing for report, checklist, evidence, factory observations, and action forms.                                                                          | Reviewer cannot modify inspection content. Correction must be done by Return.                            | Reviewer cannot edit submitted inspection fields.                          |
| MVP1-M06-013 | Display Pending Review Queue | Open Pending Review Queue                                                                      | Load inspections assigned to the reviewer. Display priority, SLA, risk, inspection type, execution mode and submission date.                                      | Reviewer shall only view assigned inspections unless granted supervisor permissions.                     | Queue loads successfully.                                                  |
| MVP1-M06-014 | Search & Filter Queue        | Search and Filter                                                                              | Filter by Inspection Number, Factory, Region, Risk, Date, Inspector, Visit Type, Status and SLA.                                                                  | Multiple filters may be combined.                                                                        | Filters operate correctly.                                                 |
| MVP1-M06-015 | Open Submitted Inspection    | Open Inspection                                                                                | Load latest submitted inspection version including report, checklist, evidence, factory verification, action forms, timeline and audit history.                   | Latest submitted version shall always be opened.                                                         | Package loads successfully.                                                |

| Requirement  | Capability                  | User action                                                                         | System reaction                                                                                                                                                               | Business rule                                                                | Acceptance                                          |

| MVP1-M06-016 | Display Inspection Summary  | Review Summary                                                                      | Display inspection number, factory, inspector, execution mode, visit type, submission date, total violations, critical violations, evidence count and generated action forms. | Summary is read-only.                                                        | Summary displayed successfully.                     |
| MVP1-M06-017 | Review Factory Verification | Review Changes                                                                      | Display Source Value, Observed Value, Before/After comparison and attached evidence.                                                                                          | Reviewer cannot edit factory information.                                    | Changes displayed correctly.                        |
| MVP1-M06-018 | Review Inspection Report    | Open Report                                                                         | Display report responses, attachments and comments.                                                                                                                           | Report is read-only.                                                         | Report displayed successfully.                      |
| MVP1-M06-019 | Review Inspection Checklist | Open Checklist                                                                      | Display inspection items, responses, violations and evidence.                                                                                                                 | Reviewer cannot modify responses.                                            | Checklist displayed successfully.                   |
| MVP1-M06-020 | Review Evidence             | Preview Evidence                                                                    | Display photos, videos, documents and annotations linked to each inspection item.                                                                                             | Evidence is read-only.                                                       | Evidence displayed successfully.                    |
| MVP1-M06-021 | Review Action Forms         | Open Action Forms                                                                   | Display completed action forms, signatures and attachments.                                                                                                                   | Reviewer cannot modify forms.                                                | Action Forms displayed successfully.                |
| MVP1-M06-022 | Review Timeline             | View Timeline                                                                       | Display chronological events from planning until submission.                                                                                                                  | Timeline is immutable.                                                       | Timeline displayed successfully.                    |
| MVP1-M06-023 | Review Version History      | Compare Versions                                                                    | Display previous submissions and highlight differences between versions.                                                                                                      | All submitted versions remain available.                                     | Version comparison works correctly.                 |
| MVP1-M06-024 | Return Inspection           | Click Return                                                                        | Require return reason, allow section selection, create return event, unlock inspection, notify inspector and update workflow.                                                 | Return reason is mandatory.                                                  | Inspection successfully returned.                   |
| MVP1-M06-025 | Approve Inspection          | Click Approve                                                                       | Validate inspection, permanently lock latest version, update status to Approved, trigger Compliance Management, notify inspector and update timeline.                         | Approved inspections become permanently read-only.                           | Inspection approved successfully.                   |
| MVP1-M06-026 | Reject Inspection           | Click Reject                                                                        | Require rejection reason, update workflow to Rejected, close inspection, notify inspector and update timeline.                                                                | Compliance Management shall not be triggered.                                | Inspection rejected successfully.                   |
| MVP1-M06-027 | Generate Audit Events       | None                                                                                | Record review opened, comments, approval, return, rejection, version viewed and timeline viewed.                                                                              | Every reviewer action shall be auditable.                                    | Audit events generated successfully.                |
| MVP1-M06-028 | Handle Review Errors        | Retry                                                                               | Handle workflow failures, repository failures and validation failures while preserving review integrity.                                                                      | Partial review processing shall never occur.                                 | Errors handled safely.                              |
| MVP1-M06-029 | Reviewer Queue              | Open queue, view assigned inspections.                                              | Load inspections with status Pending Review assigned to the reviewer.                                                                                                         | Reviewer sees only assigned inspections unless supervisor permission exists. | Reviewer can see assigned pending inspections.      |
| MVP1-M06-030 | Queue Filters & Search      | Search/filter by inspection number, factory, inspector, risk, date, status, region. | Apply filters and return matching inspections.                                                                                                                                | Multiple filters can be combined.                                            | Filters return accurate results.                    |
| MVP1-M06-031 | SLA & Risk Indicators       | View SLA/risk badges.                                                               | Display SLA status, overdue flag, risk level, critical violations count.                                                                                                      | SLA indicator is calculated from submission time.                            | SLA and risk badges display correctly.              |
| MVP1-M06-032 | Open Inspection From Queue  | Click inspection record.                                                            | Load latest submitted version in read-only mode.                                                                                                                              | Latest submitted version is opened by default.                               | Reviewer can open inspection successfully.          |
| MVP1-M06-033 | Review Workspace            | Review submitted package.                                                           | Load report, checklist, evidence, factory observations, action forms, violations, timeline, audit, versions.                                                                  | Reviewer cannot edit submitted content.                                      | Workspace loads complete package.                   |
| MVP1-M06-034 | Review Factory Observations | View source/observed values and evidence.                                           | Display Source Value, Observed Value, Verified/Updated status, Before/After, evidence.                                                                                        | Factory master data is not updated in Phase 1.                               | Reviewer sees all inspector-touched factory fields. |
| MVP1-M06-035 | Review Inspection Report    | View report fields and attachments.                                                 | Render report in read-only mode from submitted version.                                                                                                                       | Report cannot be modified by reviewer.                                       | Report displays accurately.                         |

| Requirement  | Capability                     | User action                                     | System reaction                                                                                                           | Business rule                                                            | Acceptance                                   |
|--------------|--------------------------------|-------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------|----------------------------------------------|
| MVP1-M06-036 | Review Checklist               | View answers, comments, violations, evidence.   | Display required/optional items, answers, generated violations, penalties, corrective actions.                            | Reviewer cannot override predefined violation/penalty.                   | Checklist displays full execution result.    |
| MVP1-M06-037 | Review Evidence                | Preview photos, videos, documents, annotations. | Display evidence grouped by source: factory data, report, item, action form.                                              | Evidence is read-only after submission.                                  | Reviewer can preview all evidence.           |
| MVP1-M06-038 | Review Action Forms            | Open generated forms.                           | Display completed action forms, attachments, signatures/refusals.                                                         | Generated forms are read-only.                                           | Action forms display correctly.              |
| MVP1-M06-039 | Review Timeline & Audit        | View timeline and audit.                        | Display immutable timeline and audit events from planning to submission.                                                  | Timeline and audit cannot be changed.                                    | Reviewer can trace all events.               |
| MVP1-M06-040 | Review Version History         | Open/compare versions.                          | Display all submitted versions and differences between them.                                                              | No version is overwritten.                                               | Reviewer can compare resubmissions.          |
| MVP1-M06-041 | Receive Returned Inspection    | Open returned inspection.                       | Notify inspector and show returned inspection in assigned work.                                                           | Only assigned inspector can update returned inspection.                  | Inspector receives returned inspection.      |
| MVP1-M06-042 | Display Return Details         | Review reason, comments, returned sections.     | Display return reason, reviewer comments, returned sections, related fields/items/forms.                                  | Return reason is mandatory.                                              | Inspector understands required corrections.  |
| MVP1-M06-043 | Unlock Returned Sections       | Edit returned sections only.                    | Unlock returned sections and keep non-returned sections read-only.                                                        | Inspector can edit only returned sections.                               | Only returned sections are editable.         |
| MVP1-M06-044 | Save Returned Updates          | Save draft.                                     | Save edits, evidence changes, comments, and updated values.                                                               | Returned draft remains editable until resubmitted.                       | Returned updates are saved.                  |
| MVP1-M06-045 | Resubmit Returned Inspection   | Click Resubmit.                                 | Validate returned sections, create new submission version, lock version, status → Pending Review, notify reviewer.        | Every resubmission creates new version. Previous version remains locked. | Resubmitted inspection returns to reviewer.  |
| MVP1-M06-046 | Compare Returned Versions      | Compare previous vs latest.                     | Highlight changes between previous submitted version and resubmitted version.                                             | Reviewer reviews latest version while history remains accessible.        | Reviewer can identify corrected sections.    |
| MVP1-M06-047 | Create Submission Version      | None                                            | Create immutable version containing report, checklist, evidence, observations, action forms, comments, timeline snapshot. | Submitted versions are never overwritten.                                | Version created on every submission.         |
| MVP1-M06-048 | Maintain Version History       | View versions.                                  | Store each submitted version with version number, timestamp, inspector, reviewer decision.                                | Latest submitted version is used for active review.                      | All versions remain accessible.              |
| MVP1-M06-049 | Audit Reviewer Decision        | None                                            | Log reviewer ID, decision, reason, comments, affected sections, previous status, new status, timestamp.                   | Audit record is immutable.                                               | Every decision is fully auditable.           |
| MVP1-M06-050 | Audit Returned Edits           | None                                            | Log edited sections, changed fields, evidence updates, comments, resubmission timestamp.                                  | Returned edits must be traceable to previous version.                    | Corrections are visible in audit.            |
| MVP1-M06-051 | Timeline Event Generation      | View timeline.                                  | Create timeline events: Submitted, Review Opened, Returned, Resubmitted, Approved, Rejected.                              | Timeline is the single source of truth for business events.              | Timeline reflects full review journey.       |
| MVP1-M06-052 | Reviewer Comments Immutability | Add comment where allowed.                      | Store reviewer comments as immutable records.                                                                             | Comments cannot be edited or deleted after submission.                   | Reviewer comments are preserved.             |
| MVP1-M06-053 | Version Comparison             | Compare selected versions.                      | Display before/after differences between versions including changed fields, evidence, items, action forms.                | Comparison is read-only.                                                 | Reviewer can compare versions accurately.    |
| MVP1-M07-001 | Factory Profile Page           | Open factory profile.                           | Load factory master profile, license, CR, visits, inspections, violations, penalties, scores, timeline.                   | Factory 360° is the full profile page, not the small Factory Card.       | User can open complete factory profile.      |
| MVP1-M07-002 | Factory Overview               | View overview.                                  | Display factory name, CR, license, status, stage, activity, sector, region, city.                                         | Data source is Senaei unless updated through approved future flow.       | Overview displays correct synchronized data. |

| Requirement  | Capability               | User action                         | System reaction                                                                                                    | Business rule                                                                              | Acceptance                                        |
|--------------|--------------------------|-------------------------------------|--------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|---------------------------------------------------|
| MVP1-M07-003 | License Information      | View license details.               | Display license number, status, stage, issue date, expiry date, activity, license holder.                          | License data is read-only in Factory 360°.                                                 | License details display correctly.                |
| MVP1-M07-004 | CR Information           | View CR information.                | Display CR number, legal name, CR status, owner details if available.                                              | CR info follows latest synchronized source.                                                | CR details display correctly.                     |
| MVP1-M07-005 | Location & Map           | View map and pins.                  | Show license pin, planner pin if available, actual observed locations from inspections, GPS override history.      | Planner pin does not overwrite license pin. Actual observed location is stored separately. | All location points display correctly.            |
| MVP1-M07-006 | Products                 | View product list.                  | Load products, HS codes, production details if available.                                                          | Product data is read-only unless future approved update flow exists.                       | Products display correctly.                       |
| MVP1-M07-007 | Raw Materials            | View raw materials.                 | Load raw material list from synchronized source.                                                                   | Read-only.                                                                                 | Raw materials display correctly.                  |
| MVP1-M07-008 | Workforce                | View employee data.                 | Display employee count and related workforce fields.                                                               | Inspector observations do not update source directly in Phase 1.                           | Workforce data and observations are visible.      |
| MVP1-M07-009 | Investment & Capacity    | View indicators.                    | Display investment size, capacity, industrial indicators.                                                          | Read-only.                                                                                 | Investment section loads correctly.               |
| MVP1-M07-010 | Visit History            | View visits, open visit.            | Display planned, cancelled, completed, expired visits with status and dates.                                       | Visits are chronological and filterable.                                                   | User can view visit history.                      |
| MVP1-M07-011 | Inspection History       | Open inspection.                    | Display submitted, approved, returned, rejected inspections with inspector, result, date.                          | Submitted/approved inspections remain read-only.                                           | Inspection history displays correctly.            |
| MVP1-M07-012 | Violations & Penalties   | View violations/penalties.          | Display open/closed violations, penalties, corrective actions, issue dates, due dates.                             | Only approved inspection outcomes appear as official compliance records.                   | Violations and penalties display correctly.       |
| MVP1-M07-013 | Corrective Actions       | View action status.                 | Display corrective action, source violation, due date, status, evidence if any.                                    | Corrective actions originate from approved compliance outcomes.                            | Corrective actions show status and due date.      |
| MVP1-M07-014 | Factory Health Score     | View score details.                 | Display current score, score history, score drivers, last recalculation date.                                      | Score recalculation rules come from Risk/Health Engine.                                    | Score and history display correctly.              |
| MVP1-M07-015 | Risk Profile             | View risk profile.                  | Display current risk level, risk drivers, risk history, related violations.                                        | Risk is read-only and calculated by Risk Engine.                                           | Risk profile displays correctly.                  |
| MVP1-M07-016 | Documents & Evidence     | Preview/download allowed documents. | Display generated PDFs, inspection reports, penalty notices, evidence references.                                  | Access controlled by permission.                                                           | Authorized users can view documents.              |
| MVP1-M07-017 | Factory Timeline         | View timeline.                      | Display events: sync, visit planned, inspection submitted, approved, penalty issued, score updated.                | Timeline events are immutable.                                                             | Timeline accurately shows factory history.        |
| MVP1-M07-018 | Factory Card Link        | Click Open Factory 360°.            | Navigate to Factory 360° in new/detail view.                                                                       | Factory Card is summary only; Factory 360° is full page.                                   | User can open full profile from card.             |
| MVP1-M07-019 | Access Control           | View authorized sections.           | Apply role-based visibility for tabs, documents, evidence, penalties.                                              | Users only see sections allowed by role.                                                   | Unauthorized sections are hidden/blocked.         |
| MVP1-M07-020 | Error Handling           | Retry or view partial data.         | Show partial data with warning if a source is unavailable.                                                         | Factory profile should not fully fail if one section fails.                                | User sees available data and clear error message. |
| MVP1-M08-001 | Command Center Dashboard | View live operations.               | Load live visits, inspectors, SLA, alerts, maps, risk indicators.                                                  | Operations Center is monitoring-only unless user has supervisor permissions.               | Dashboard loads live inspection status.           |
| MVP1-M08-002 | Live Operations Map      | Pan, zoom, filter, open pins.       | Display factory pins, inspector pins, active journeys, execution locations.                                        | Map refresh interval is configurable.                                                      | Live map shows accurate locations.                |
| MVP1-M08-003 | Visit Monitoring         | Filter/open visit.                  | Display visits by operational state: New, Prepared, On the Way, Arrived, Executing, Submitted, Cancelled, Expired. | Operational state is separate from workflow status.                                        | Visits display correct current state.             |
| MVP1-M08-004 | Inspector Monitoring     | View inspector workload/location.   | Display inspector availability, active visit, live location, offline/online state, workload.                       | Inspector location visible only during active journey/execution and based on policy.       | Supervisor can monitor inspector status.          |

| Requirement  | Capability                | User action                         | System reaction                                                                                                      | Business rule                                                           | Acceptance                                          |
|--------------|---------------------------|-------------------------------------|----------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------|-----------------------------------------------------|
| MVP1-M08-005 | SLA Monitoring            | View overdue items.                 | Calculate overdue journey, execution, submission, review based on SLA rules.                                         | SLA uses server timestamps.                                             | SLA breaches display correctly.                     |
| MVP1-M08-006 | Risk Monitoring           | View risk list/map.                 | Display high-risk factories, critical violations, high-priority inspections.                                         | Risk indicators are read-only.                                          | High-risk items are visible and filterable.         |
| MVP1-M08-007 | Alert Management          | Open alert, acknowledge if allowed. | Generate alerts for GPS override, missed visit, cancelled visit, offline inspector, stuck execution, overdue review. | Alert rules are configurable.                                           | Alerts are generated for configured events.         |
| MVP1-M08-008 | Drilldown to Visit        | Click visit.                        | Open visit detail with status, timeline, inspector, factory, execution mode.                                         | Drilldown is read-only unless user has action permission.               | User can open visit detail.                         |
| MVP1-M08-009 | Drilldown to Factory 360° | Click factory.                      | Open Factory 360°.                                                                                                   | Same access rules as Factory 360°.                                      | User can open factory profile.                      |
| MVP1-M08-010 | Branch / Region Filtering | Select branch/region/city.          | Filter all widgets, maps, lists, alerts by selected geography.                                                       | Users see only authorized regions.                                      | Region filters work correctly.                      |
| MVP1-M08-011 | Workload Monitoring       | View workload.                      | Display assigned, active, completed, overdue visits by inspector/branch.                                             | Workload is based on current and planned visits.                        | Workload metrics display correctly.                 |
| MVP1-M08-012 | Cancellation Monitoring   | View reasons.                       | Display cancelled visits by reason, inspector, factory, region, date.                                                | Cancellation reason is mandatory in execution flow.                     | Cancellations are visible and categorized.          |
| MVP1-M08-013 | GPS Override Monitoring   | View override events.               | Display GPS override records with planned vs actual location and inspector confirmation.                             | Override does not block inspection if confirmed, but must be auditable. | GPS overrides are traceable.                        |
| MVP1-M08-014 | Live Tracking History     | View route history.                 | Display journey path, timestamps, arrival point, actual location.                                                    | Tracking history is immutable.                                          | Route history displays correctly.                   |
| MVP1-M08-015 | Operational Timeline      | View timeline.                      | Display key events from planning to review/compliance.                                                               | Timeline is the single source of truth.                                 | Timeline reflects all major events.                 |
| MVP1-M08-016 | Operations KPIs           | View KPIs.                          | Calculate visits planned, completed, cancelled, overdue, active inspectors, avg duration, SLA breach rate.           | KPI calculation period is configurable.                                 | KPIs display accurately.                            |
| MVP1-M08-017 | Export Operational Data   | Export.                             | Export filtered visits/alerts/KPIs according to permissions.                                                         | Export is permission-controlled and audited.                            | Authorized user can export data.                    |
| MVP1-M08-018 | Access Control            | View permitted scope.               | Apply role, region, branch and permission restrictions.                                                              | Users cannot view unauthorized inspectors/factories/regions.            | Access restrictions apply correctly.                |
| MVP1-M08-019 | Error Handling            | Retry/refresh.                      | Show partial dashboard if one data source fails; log failure; allow refresh.                                         | One failed widget must not break the whole Operations Center.           | Dashboard remains usable with clear error messages. |
